Please email Vincent LÓPEZ, the
HERPA® International Sales Manager at
vincentlopez@mfherpa.es for any
enquiries.

HERPA® is one of the few mid-sized agricultural sprayer manufacturer in the world which manufactures its own fan units and diaphragm pumps for its comprehensive range of sprayers.

HERPA® is happy to sell you its range of sprayers as finished goods and is also happy to sell you the 2 main components of a sprayer - diaphragm pumps and fan units - to allow you to assemble and create your own brand of sprayers in your country of origin. You'll be able to take advantage of local financial and tax aids and set up your own product with a reduced and more flexible time of delivery for the comfortability of your customers. Polyester tanks, and frames as shown on the photos can be produced locally without high financial investments. HERPA® is ready to also assist you regarding the molds, sprayers accessories and needed training .

HERPA® is aware of the room taken by the tanks in containers this is why HERPA® put at your disposal the 2 main components of a sprayer - the pump and the fan unit - in order to allow you to save room and money in cost transportation. **So far, you were obliged to buy from different suppliers the fans, on one hand, and the pumps, on the other hand, HERPA® makes it simple for you, you can now order from an unique provider: HERPA®.**
WE WANT TO BE YOUR TECHNOLOGY PARTNER.
